✅**Recorded:**
WixSync Functional Validation #1 — Schema Self-Interpreting Across Engines (Gemini & ChatGPT)

Summary

- **Date:** 2025-10-31
- **Test Persona:** Traveler Einstein v1.1a
- **Platforms:** Gemini ↔ ChatGPT (GPT-5)
- **Result:** ✅ Schema recognized and acted upon natively by both systems.

Details

1. Both AIs parsed the same WixSync JSON descriptor without external explanation.
2. Gemini independently identified and applied the persona, focus weights, and pre-run prompt logic.
3. Topic modularity (e.g., motorcycle / engine discussion) was added and removed dynamically without altering persona identity.
4. This confirms that the **WixSync format is self-describing and functionally interoperable**—its field names and structure are sufficient for correct emulation across heterogeneous AI engines.

Status: PASSED — First functional validation of self-interpreting schema.
